

A 10x10 grid with various patterns and green zigzag lines. The grid is divided into several regions by these patterns. The top-left region (rows 1-4, columns 1-4) is a checkerboard pattern of light and dark gray squares. The top-right region (rows 1-4, columns 5-10) is a checkerboard pattern of light and dark gray squares. The middle-left region (rows 5-8, columns 1-4) is a checkerboard pattern of light and dark gray squares. The middle-right region (rows 5-8, columns 5-10) is a checkerboard pattern of light and dark gray squares. The bottom-left region (rows 9-10, columns 1-4) is a checkerboard pattern of light and dark gray squares. The bottom-right region (rows 9-10, columns 5-10) is a checkerboard pattern of light and dark gray squares. The central region (rows 5-8, columns 5-10) is a checkerboard pattern of light and dark gray squares. The rightmost region (rows 1-10, column 10) is a vertical strip of light gray squares. The bottom-right region (rows 1-10, columns 5-10) is a checkerboard pattern of light and dark gray squares. The grid is also filled with green zigzag lines that form a complex pattern across the entire grid.

Color in the QR code modules. If a module contains only a diagonal line, color only the upper left half. Only color in modules that lie on the green line.

For each (interleaved) data digit (4 consecutive bits along the green line), fill it inside the block table. Interpret squares with a diagonal line as inverted.

0 : 0000	8 : 1000
1 : 0001	9 : 1001
2 : 0010	A : 1010
3 : 0011	B : 1011
4 : 0100	C : 1100
5 : 0101	D : 1101
6 : 0110	E : 1110
7 : 0111	F : 1111

[illegible][illegible]

Now, decode the data. Read the data block-by-block, essentially concatenating the blocks. The first digit indicates the encoding mode: 1 for numeric, 2 for alphanumeric, 4 for byte. If it's not byte, this tutorial will not work - sorry! The next two digits represent the number of characters to read. After, each two digits together form a number from 0 to 255, representing the ASCII values. It's easy to memorize: 31 (hex) is '1', 41 is 'A', 61 is 'a', 2E is '.', 2F is '/', and 3A is ':' (full table on page 7).
