

A 10x10 grid with various patterns and a green zigzag line. The grid is divided into four quadrants by a vertical line at column 5 and a horizontal line at row 5. The top-left quadrant (columns 1-5, rows 1-5) contains a checkerboard pattern of light and dark gray squares. The top-right quadrant (columns 6-10, rows 1-5) contains a pattern of light gray squares with diagonal lines. The bottom-left quadrant (columns 1-5, rows 6-10) contains a pattern of light gray squares with diagonal lines. The bottom-right quadrant (columns 6-10, rows 6-10) contains a pattern of light gray squares with diagonal lines. A green zigzag line is drawn across the grid, starting from the bottom-left corner and ending at the top-right corner. The line is composed of small, connected segments that form a zigzag pattern. The line starts at the bottom-left corner (row 10, column 1) and ends at the top-right corner (row 1, column 10). The line is composed of small, connected segments that form a zigzag pattern. The line starts at the bottom-left corner (row 10, column 1) and ends at the top-right corner (row 1, column 10).

Color in the QR code modules. If a module contains only a diagonal line, color only the upper left half. Only color in modules that lie on the green line.

For each (interleaved) data digit (4 consecutive bits along the green line), fill it inside the block table. Interpret squares with a diagonal line as inverted.

0 : 0000	8 : 1000
1 : 0001	9 : 1001
2 : 0010	A : 1010
3 : 0011	B : 1011
4 : 0100	C : 1100
5 : 0101	D : 1101
6 : 0110	E : 1110
7 : 0111	F : 1111

Now, decode the data. Read the data block-by-block, essentially concatenating the blocks. The first digit indicates the encoding mode: 1 for numeric, 2 for alphanumeric, 4 for byte. If it's not byte, this tutorial will not work - sorry! The next two digits represent the number of characters to read. After, each two digits together form a number from 0 to 255, representing the ASCII values. It's easy to memorize: 31 (hex) is '1', 41 is 'A', 61 is 'a', 2E is '.', 2F is '/', and 3A is ':' (full table on page 7).
